

Software Development

- Works with Meteorological and Ambient Monitoring Networks
- Real-time displays
- Windrose displays
- Customer defined screen displays
- AQS reporting
- Dispersion model modules
- Historical data reviews
- Statistical analysis
- Simple configuration - reads ASCII files
- Automated alerts and alarms
- Windows 9X/2000/XP

Commercially available software packages often do not contain features that are needed by our clients or the required software may simply not exist. Meteorological Solutions Inc. can design specialized software tailored to your specific requirements. Applications include, but are not limited to, data acquisition, data management, database manipulation, quality assurance, and real-time graphical representations.

Software Development

Meteorological Solutions Inc. can design software to display your meteorological or air quality data in a meaningful, intuitive fashion. We can provide clients with software which will automate downloading of data from remote monitoring sites, perform quality assurance checks on the data, generate a quality assurance report, produce time parameter plots of the data and archive the data for future reference. With our software packages we have been able to offer clients extremely high data recovery for their ambient monitoring projects and the ability to view their data in exactly the manner they want.
